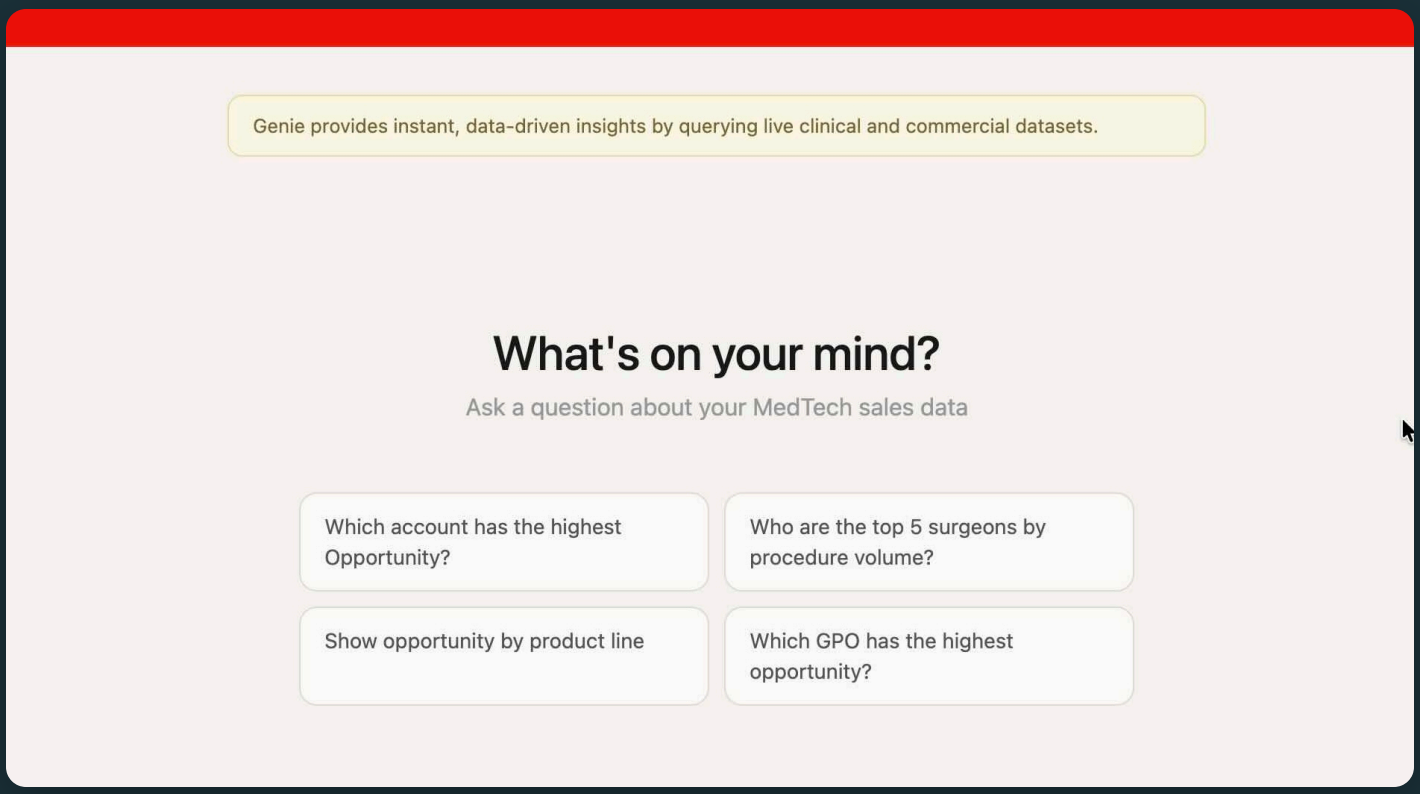
HEALTHCARE & MEDICAL DEVICES · AI-POWERED SALES INTELLIGENCE

MedTech Sales Genie

An AI-powered sales advisor that gives surgical product reps instant, natural-language access to procedure volumes, upgrade opportunities, and account targeting intelligence — all governed by Databricks Unity Catalog.



Natural Language Queries

Reps ask questions in plain English — Genie AI translates to governed SQL automatically.

7 Metric Views

Standardized KPIs for procedure volume, YoY growth, penetration, and upgrade opportunity.

Tiered Account Targeting

Three tiers — Upgrade, Competitive, and Market Expansion — prioritize rep effort by opportunity type.

Governed Data

Unity Catalog enforces access control, lineage, and metadata across every query.

Evaluation & Monitoring

Built-in Genie benchmarks and conversation monitoring ensure answer quality at scale.

One-Click Deployment

Declarative Automation Bundles deploy the full pipeline, Genie space, and branded app together.

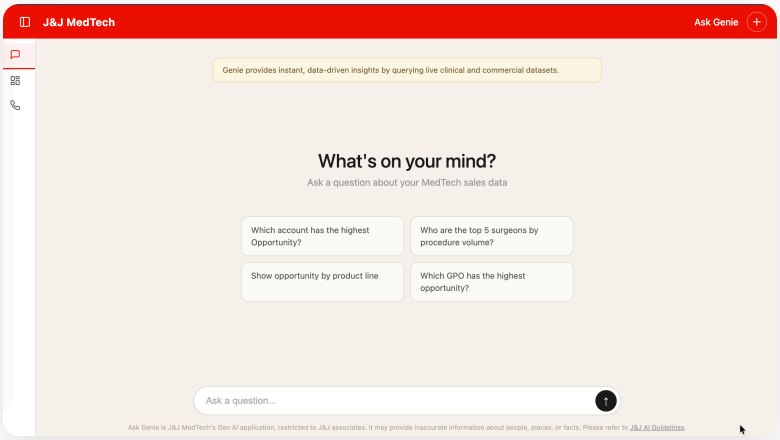
AI SALES ADVISOR

Ask Genie — Branded Chat App

A custom-branded web application where surgical product reps ask questions in plain English and get instant, data-backed answers from governed sales data.

THE CHALLENGE

- Sales reps spend hours searching spreadsheets and reports to find account-level insights before customer meetings
- Territory and product data lives across disconnected systems with no single source of truth
- Identifying high-value upgrade, competitive, and market-expansion opportunities requires manual analysis across multiple data sources



KEY CAPABILITIES

→ Natural language queries across all sales datasets

→ Instant procedure volume and surgeon rankings

→ Smart follow-up suggestions after every answer

→ View underlying SQL for transparency and trust

→ Sales analytics dashboard with KPI cards

AI-POWERED INSIGHT

Reps type questions like *"Who are the top 5 surgeons by procedure volume?"* and receive instant, ranked results with hospital names, specialties, and exact procedure counts — no SQL skills required.

DATABRICKS PLATFORM

Genie AI · Databricks Apps · Unity Catalog · SQL Warehouse · Metric Views · DAB Bundles

$129.6M
Total upgrade opportunity identified across all territories and product lines

850+
Records across 3 unified datasets — HCP volumes, upgrades, and account targeting

7 KPIs
Governed metric views for procedure volume, growth, penetration, and opportunity

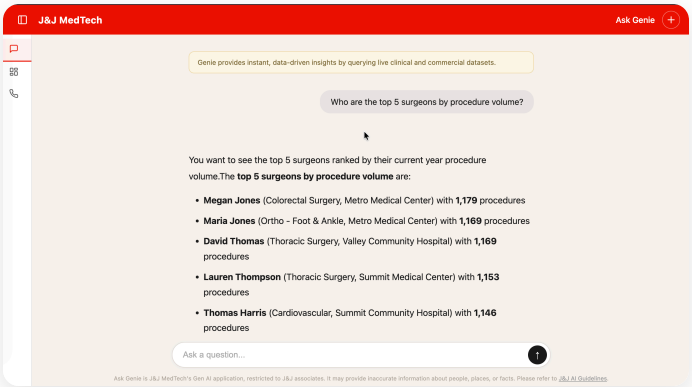
USER EXPERIENCE

Conversational Intelligence & Analytics

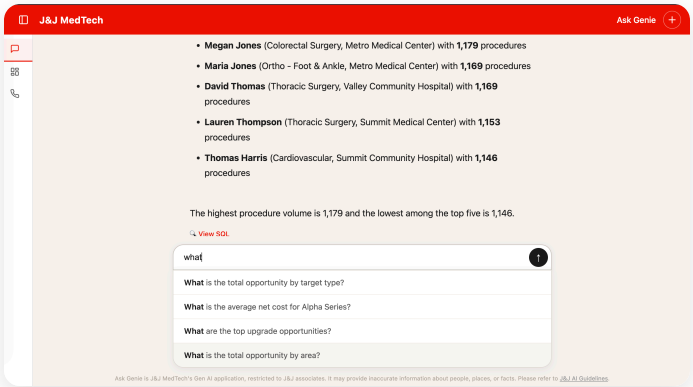
From natural-language questions to structured dashboards — reps get both ad-hoc answers and at-a-glance KPIs in one branded experience.

CONVERSATIONAL AI CHAT



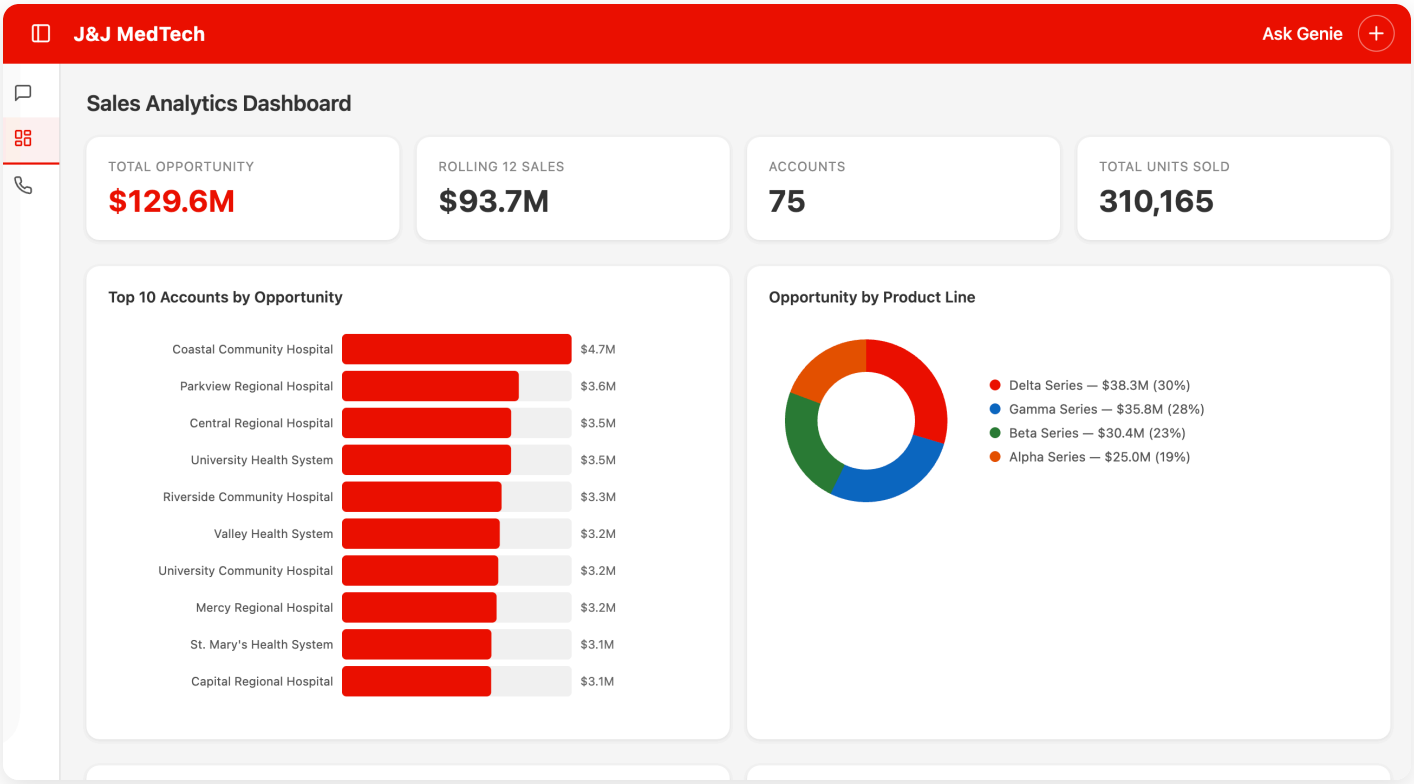
Ranked surgeon results with hospital, specialty, and procedure counts

FOLLOW-UP SUGGESTIONS & SQL TRANSPARENCY



Smart follow-up questions and "View SQL" option build trust and exploration

SALES ANALYTICS DASHBOARD



$129.6M	$93.7M	75	310K
Total Opportunity	Rolling 12 Sales	Accounts	Total Units Sold

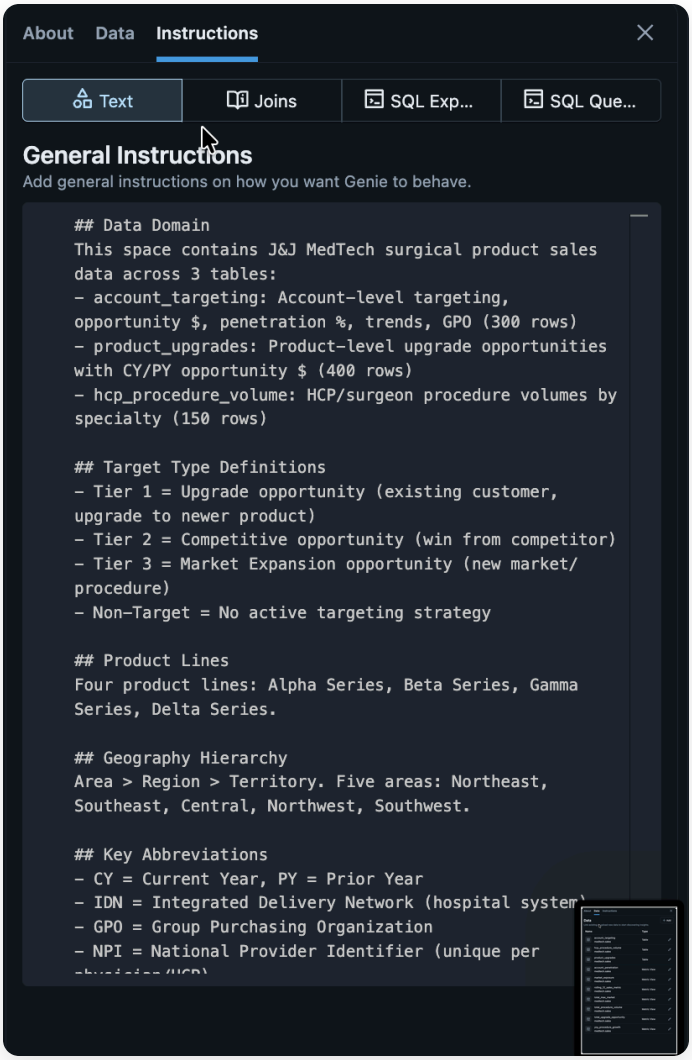
GENIE SPACE CONFIGURATION

Data Governance & Business Semantics

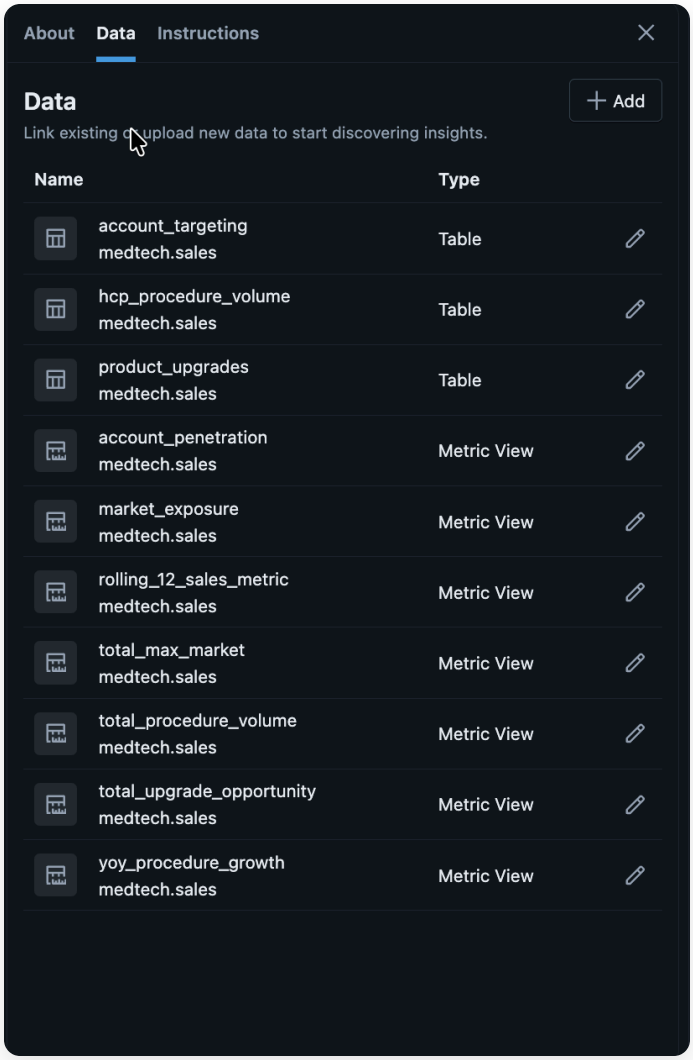
The Genie space is configured with rich domain instructions, curated example queries, and governed data tables and metric views — ensuring accurate, context-aware answers.

GENERAL INSTRUCTIONS & DOMAIN KNOWLEDGE



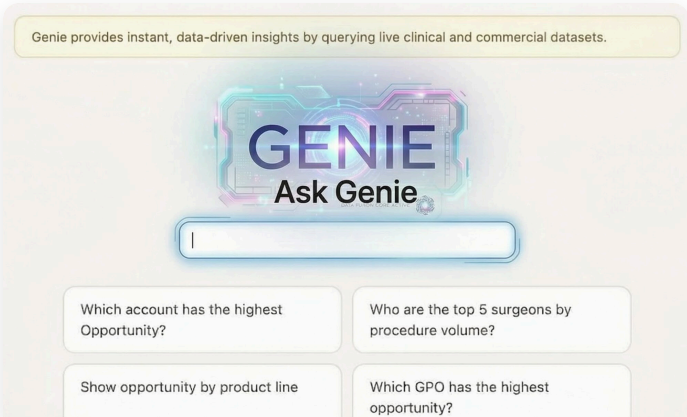
Data domain, target type definitions, product lines, geography hierarchy, and key abbreviations embedded as instructions

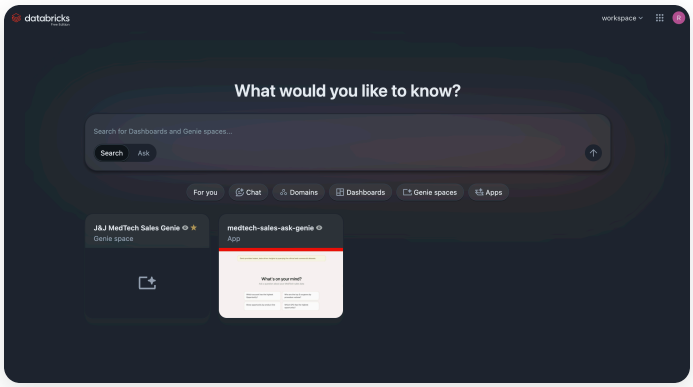
GOVERNED TABLES & METRIC VIEWS



3 tables and 7 metric views registered in the Genie space from Unity Catalog

GENIE SPACE LANDING — BRANDED EXPERIENCE





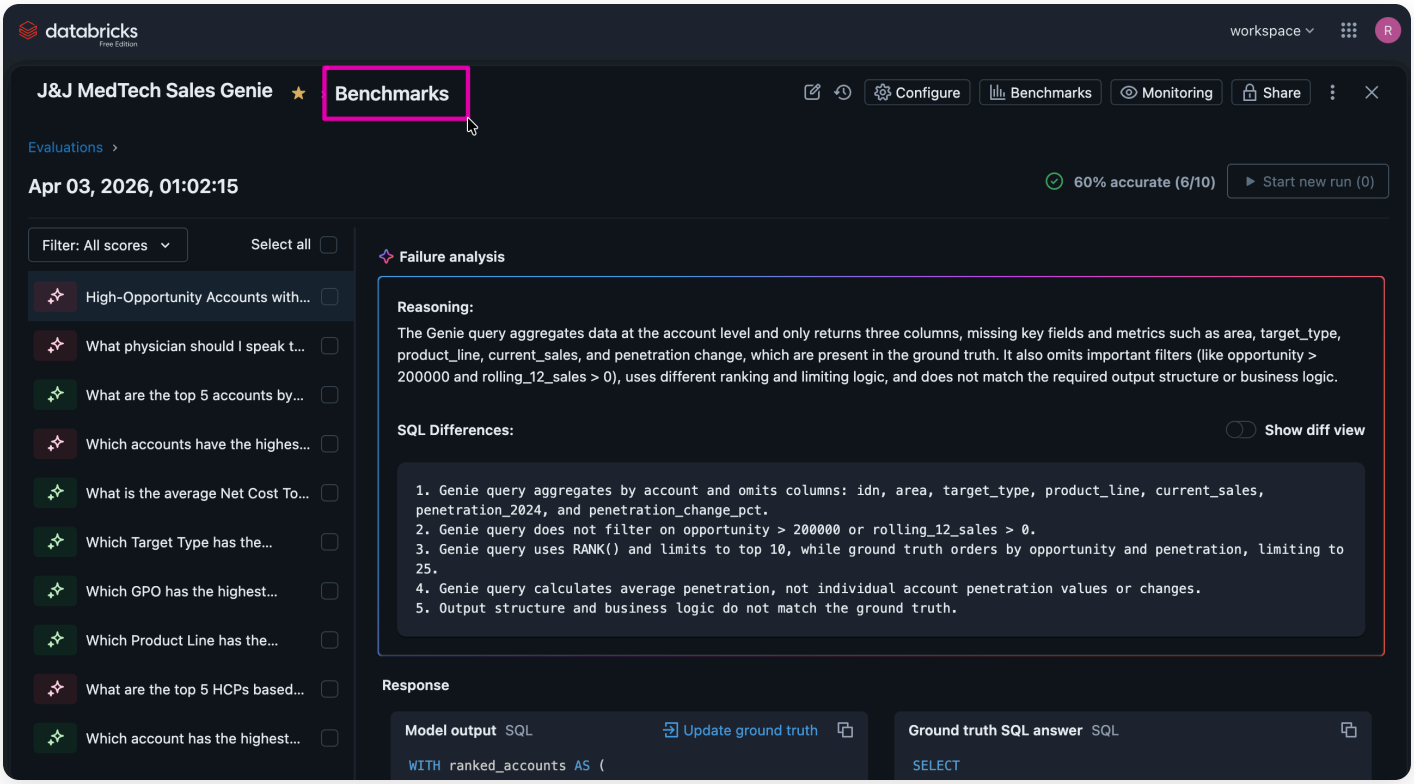
Genie space and App accessible from the Databricks workspace home

QUALITY ASSURANCE

Evaluation Benchmarks & Monitoring

Built-in evaluation benchmarks validate answer accuracy, while conversation monitoring tracks quality across every interaction — ensuring reliable, production-grade AI for your sales team.

GENIE EVALUATION BENCHMARKS — FAILURE ANALYSIS



Automated benchmark runs test 10+ question categories against ground-truth SQL. Failure analysis highlights reasoning gaps, missing filters, and column omissions — enabling targeted prompt engineering to continuously improve accuracy.

CONVERSATION MONITORING — LIVE QUALITY TRACKING

DATA FLOW SUMMARY

1. Ingest: Three CSV datasets are uploaded to Unity Catalog Volumes and loaded into managed tables with primary keys, column comments, and table descriptions. **2. Enrich:** Seven metric views create a governed semantic layer — standardized KPIs for procedure volume, growth, penetration, opportunity, and market exposure. **3. Serve:** A Genie space powers natural-language querying with domain instructions, example queries, and SQL expression hints. The branded React/FastAPI app surfaces this via Genie API. **4. Monitor:** Evaluation benchmarks measure accuracy against ground-truth SQL, while conversation monitoring tracks quality ratings across every user interaction.
